

\_\_\_\_\_ **tail vein** is along the **lateral** side of the tail.

\_\_\_\_\_ Blood can be collected from, or substances administered via the **retroorbital sinus** only when mice are isoflurane **anesthetized**.

\_\_\_\_\_ **Intravenous (IV)** administrations ~~at multiple injections~~ over time requires planning to **preserve access**.

**Demonstrate/Assess:**

***Tail Vein (IV) Injection***

\_\_\_\_\_ Place mouse in a **50ml conical tube with air holes drilled in it**.

\_\_\_\_\_ Secure the mouse in the restrainer to a **raised** surface.

\_\_\_\_\_ Paint **warm water** over the target vein with cotton tipped applicator stick.

\_\_\_\_\_ Use a **27-30g** needle or 27g **butterfly catheter** for multiple dosing.
